

Repot a Plant QuickTip

What you need:

1. big plant pot (bigger than the one you're switching from)
2. packing peanuts
3. trimming shears
4. watering pot

How to do it:

1. Choose a pot that will give your plant with the old pot an inch of space from the old pot to the inside of the pot.
2. Fill the new pot with packing peanuts until the bottom of the pot is covered.
3. Add some fresh soil to cover the peanuts in the new pot.
4. Transfer the plant from the old pot to the new pot.
5. Using the shears, trim dead leaves and circling roots (if any) from the plant.
6. Fill in the gaps in the new pot with fresh soil.
7. Water the plant.
